

1996 MASSACHUSETTS 303(d) LIST

WATERBODIES ADDED TO THE LIST

Housatonic (21)

Center Pond in Dalton was added to the list as the result of a DPH fish edibility advisory for PCB.

Quinebaug (41)

Eleven lakes and ponds in the Quinebaug River Basin were added to the 303(d) list.

French (42)

Twenty-three lakes and ponds were added to the list.

Blackstone (51)

Approximately 70 lakes and ponds in the Blackstone River Basin were added to the 303(d) list as the result of synoptic assessments performed by MADEP.

Neponset (73)

Results of the 1994 Neponset River Basin monitoring and assessment efforts identified as impaired sixteen (16) tributary streams that were previously unassessed. Eight of these exhibited elevated coliform bacteria counts. These are Germany, Hawes, Traphole, Beaver Meadow, Pequid, Purgatory, Unquity, and Ponkapoag brooks. Five streams exhibited impairment of the benthic macroinvertebrate community, but will require further investigation to determine the causes and sources of this impairment. These streams are Mill Brook (Westwood), Mill Brook (Medfield), Beaver Brook, Massapoag Brook, and Pine Tree Brook. Two tributaries were determined to be affected by low flow resulting from water withdrawals. These are Mine Brook and Plantingfield Brook. While none of the above streams are candidates for TMDL at this time, they will require control measures and/or further investigation.

Finally, 22 lakes and ponds were added to the list as the result of synoptic assessments performed as part of the 1994 Neponset watershed assessment program.
